No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

/site_2 Not I; The library was constructed according Site_2: Not I; The library was constructed according Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. Denatured RNA was size fractionated on a 1% agarose gel.First strand cDNA synthesis was primed with oligo-dT primer containing a Not I site. Double strand cDNA was size selected according to mRNA size fraction ,ligated with EcoR I adaptor , digested with NotI and then cloned directionally into pXX-Asc vector. The library tag sequence located between the Not I site and the polyA tail is TATTGAAGT. This library was created for the University Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institute of Mental Health (NIMH)."

The sequence contained an oligo-dT track that was present in the oligonucleoride that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A trail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized corpus-striatum library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through
                                                                                       1 (bases 1 to 582)

The sequence contained an oligo-dT track that was present in the
oligonucleotide that was used to prime the synthesis of first
strand cDNA and therefore this may represent a bonafide poly A
tail. The sequence tag present in the cDNA between the Not1 site
and the oligo-dT track served to verify it as a clone from the
normalized embryo at 13 dpc library cDNA Library Preparation: M.B.
Soares Lab Clone distribution: clones will be available through
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3419 CTCTTCAAGACCCGGTGCTAGCAAAGTGACCAGCACTATAACTATAACCCCGGTCACAAC

The sequence contained an oligo-dT track that was present in the oligonuclectide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized ventricle at 15 dpc library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com)

Claim 1; Page 54-60; 96pp; Japanese.

transplantation.

The present sequence represents rat L-FILIP which is a filamininteracting protein. L-FILIP has a function of controlling cell migration
and cell death. L-FILIP has cytostatic, neuroprotective and
immunosuppressive activities. The L-FILIP protein can be used for
controlling cell migration and cell death, which is applicable in
developing drugs for treating or suppressing cancer or tumour metastasis
or as regulators of cell migration for transplantation therapy, and also
for controlling the mobility and cell death of nerve cells, promoting
decomposition of the actin-binding protein e.g. filamin-interacting
protein in the treatment of preiventrilcular nodular heterotopia

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human, nootropic, immunosuppressant, cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chemokinetic; thrombolytic; drug screening; arthritis; inflammation; leukaemia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents human L-FILIP which is a filamin-
interacting protein. L-FILIP has a function of controlling cell migration
and cell death. L-FILIP has cytostatic, neuroprotective and
immunosuppressive activities. The L-FILIP protein can be used for
controlling cell migration and cell death, which is applicable in
developing drugs for treating or suppressing cancer or tumour metastasis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Proteins controlling cell migration and cell death and their encoded DNAs, applicable in developing drugs for treating or suppressing cancer or tumor metastasis or as regulators of cell migration for

                                                                                                                                                                                                                                                   The present sequence represents rat S-FILIP which is a filamin-interacting protein. S-FILIP has a function of controlling cell migration and cell death. S-FILIP has a function of controlling cell migration cell death, is applicable in controlling cell migration and cell death, which is applicable in cooling action and cell death, which is applicable in developing drugs for treating or suppressing cancer or tumour metastasis or as regulators of cell migration for transplantation therapy, and also for controlling the mobility and cell death of nerve cells, promoting decomposition of the actin-binding protein e.g. filamin-interacting protein in the treatment of preiventrilcular nodular heterotopia

The present invention describes primer sets for synthesising 5602 full-
length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dr primer and an oligonucleotide comprises one of the 5602 complementary strand of a polynucleotide comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a coligonucleotide which comprises a 3'-end sequence complementary to a polynucleotide which comprises a 1'-end sequence complementary to a coligonucleotide which comprises a 1'-end sequence, where the oligonucleotide which comprises a 1'-end sequence, where the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in specification and/or disgnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs assily without any specialised methods. AAH13612 to AAH13613 represent human amino acid sequences; and AAH13612 to AAH13612 represent coligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  619
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Primer sets for synthesizing polynucleotides, particularly the 5602 full length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 MEEKVYNLTRERDELIGKLKSEEEKSSELSCSVDLLKKRLDGIEEVEREITRGRSRKGSE

The present invention describes primer sets for synthesising 5602 full-
length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dr primer and an oligonucleotide complementary to the
complementary strand of a polymucleotide which comprises one of the 5602
cucleotide sequences defined in the specification, where the
nucleotide sequences defined in the specification, where the
cuplementary strand of a polymucleotide which complementary to the
complementary strand of a polymucleotide which complementary to the
complementary strand of a polymucleotide which complementary to a
polymucleotide comprises a 3'-end sequence complementary to a
polymucleotide comprises a 1'-end sequence complementary to a
polymucleotide which comprises a 1'-end sequence, where the
coligonucleotide comprises a 1'-end sequence of an endiance in the
specification. The primer sets can be used in antisense therapy and in
complementary full-length cDNAs. The primers are also useful for the
complementary full-length cDNAs. The primers are also useful for the
complementary without any specialised methods. AAH0316 to AAH03628
represent human amino acid sequences; and AAH03629 to AAH03628
represent human amino acid sequences; and AAH03629 to AAH03628
present invention
                                               Primer sets for synthesizing polynucleotides, particularly the 5602 full length CDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.
                                                                                                                                                                              Claim 8; SEQ ID NO 12253; 2537pp + Sequence Listing; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is the protein sequence of GIP130b, a novel 130 kDa Goodpasture antigen binding protein (GPBP) interacting protein. The DOC/GIP90/130 mRNA family results from a complex diversification mechanism operating on the expression of the GIP90 gene on chromosome 3 (3q12). GIP90/130 polypeptides of the invention interact with GPBP and are capable of aggregation. They can be used to modify GPBP-GIP90/130 interactions, to modify GP90/130 aggregation, and to modulate gene expression. The invention provides GIP90/130 polypeptides, portions of them, antibodies, nucleic acid sequences, expression vectors and host chells, as well as methods for detecting GIP90/130 polypeptides and nucleic acids, and methods for treating an autoimmune disease or cancer by modifying the expression or activity of one or more GIP90/130
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New Goodpasture antigen binding protein-interacting 90 and 130 kDa polypeptides, useful for diagnosing and/or treating disorders associated with the GIP90/130 polypeptide, such as autoimmune disorders and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Goodpasture antigen binding protein interacting protein, GPBP, GIP130b, human; transcription factor; autoimmune disease; cancer;

polypeptides, useful for diagnosing and/or treating disorders associated
with the GIP90/130 polypeptide, such as autoimmune disorders and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  116 SABPEKVLRVLHRDAILAQEKSIGEDVYEKPISELDRLEEKQKETYRRMLEQLLLAEKCH 175
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is the protein sequence of GIP130c, a novel 130 kDa Goodpasture antigen binding protein (GBPB) interacting protein. The DOC/GIP90/130 mRNA family results from a complex diversification mechanism operating on the expression of the GIP90 gene on chromosome 3 dre capable of 1909 gene on chromosome 3 are capable of aggregation. They can be used to modify GBP-GIP90/130 polyapetides of the invention interact with GBPs and interactions, to modify GBP0/130 aggregation, and to modify GBP0/130 polyapetides, portions of them, antibodies, nucleic acid sequences, expression vectors and host oncells, as well as methods for detecting GIP90/130 polyapetides and host nucleic acids for detecting GIP90/130 polyapetides and host nucleic acids methods for treating an autoimmune disease or cancer polyapetides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 MRSRNOGGESSSNGHVSCPKSSIISSDGGKGPSEDAKKNKANRKEE-DVMASGTIKRHLK 59

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is the protein sequence of GIP130a, a novel 130 kba Goodpasture antigen binding protein (GPBP) interacting protein. GIP130a cDNA was isolated from a skeletal muscle cDNA library. It represents an mRNA species that results from faithful transcription and translation of GIP90 genomic DNA. GIP90/130 polypeptides interact with GPBP and are capable of aggregation. They can be used to modify GPBP-GIP90/130 interactions, to modify GP90/130 aggregation, and to modulate gene expression. The invention provides GIP90/130 polypeptides, portions of them, antibodies, nucleic acid sequences, expression vectors and host them, antibodies, and methods for detecting GIP90/130 polypeptides and nucleic acids, and methods for treating an autoimmune disease or cancer by modifying the expression or activity of one or more GIP90/130
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SAEPEKVLRVLHRDAILAQEKSIGEDVYEKPISELDRLEEKQKETYRRMLEQLLLAEKCH 175
